

PRESS RELEASE

Attention News Editors:

Broadband Technology Expert Michael J. Martin joins MICAN Communications and departs Cygnal Technologies

Professional technical services to be offered to broadband technology users and the communications industry

May 15, 2003 - Toronto, Ontario - Michael J. Martin, PMP, has departed Cygnal Technologies Corporation. Prior to his departure, Martin was simultaneously the President of Comlink Systems and Ensaf Broadcast Services, both divisions combined to form Cygnal's Broadband Networks Group. He was also an officer of Cygnal Technologies Corporation, a publicly traded company listed on the Toronto Stock Exchange (CYN:TSX).

Martin will now offer his skills, knowledge, and experience as a technical communications consultant and project manager with MICAN Communications Inc.

"I am dedicated to advancing the state of the art in managing projects and building technical communications systems. My aim is to help our customers to achieve their desired project, technical, and system design goals", says Martin. He continued, "MICAN will offer a new and unique set of professional services to its customers. There is a rapidly growing demand for outsourcing of high-end technical talent on a per project basis. MICAN expects to benefit from this need."

Before Cygnal, Martin held senior management and technical positions with Imagineering Limited and Adcom Electronics Limited. He has provided sophisticated technology-based solutions to the production, broadcast, and telecom sectors for over twenty-seven years. Martin has overseen turnkey outsourced technical installations, the supply of complicated equipment, and multifaceted systems design work for a diversity of projects. These systems have utilized various communication mediums such as film, videotape, compressed video, wireless, over-the-air transmission, satellite, microwave, optical fibre, coaxial, and twisted pair.

Founded in 1995, MICAN is a privately held company that serves the broadband networks, broadcast, telecom, cable television, and corporate and industrial sectors. MICAN offers professional services in project management, implementation management, systems design, and general communications consulting. Using the best practices and technical standards, MICAN offers conceptual model development, design, and build capabilities for cost-effective and efficient communications networks. The company also performs research and conducts studies concerning applications and technology used within the communications field.
